

# Installation Manual

## Installation and Fireplace Setup

**INSTALLER:** Leave this manual with party responsible for use and operation.

**OWNER:** Retain this manual for future reference.

**NOTICE: DO NOT** discard this manual!

# HEAT & GLO™

No one builds a better fire

**Model(s):**  
**RUTH50-B**

**WOODBURNING FIREPLACE**

Installation and service of this appliance should be performed by qualified personnel. Hearth & Home Technologies recommends HHT Factory Trained or NFI certified professionals.

**hearthED**  
FACTORY TRAINING  
Fuel Your Fire

**⚠ WARNING:** If the information in these instructions is not followed exactly, a fire or explosion may result causing property damage, personal injury, or death.

- **DO NOT** store or use gasoline or other flammable vapors and liquids in the vicinity of this or any other appliance.
- **DO NOT** overfire. Overfiring will void your warranty.
- Comply with all minimum clearances to combustibles as specified. Failure to comply may cause house fire.

### ⚠ WARNING

#### **HOT SURFACES!**

Glass and other surfaces are hot during operation AND cool down.

#### **Hot glass will cause burns.**

- **DO NOT** touch glass until it is cooled
- **NEVER** allow children to touch glass
- Keep children away
- **CAREFULLY SUPERVISE** children in same room as fireplace.
- Alert children and adults to hazards of high temperatures.

**High temperatures may ignite clothing or other flammable materials.**

- Keep clothing, furniture, draperies and other flammable materials away.

### ⚠ WARNING

#### **Fire Risk.**

For use with solid wood fuel only.  
Other fuels may overfire and generate poisonous gases (i.e. carbon monoxide).

## Safety Alert Key:

- **DANGER!** Indicates a hazardous situation which, if not avoided will result in death or serious injury.
- **WARNING!** Indicates a hazardous situation which, if not avoided could result in death or serious injury.
- **CAUTION!** Indicates a hazardous situation which, if not avoided, could result in minor or moderate injury.
- **NOTICE:** Indicates practices which may cause damage to the fireplace or to property.

# 1 Product Specific & Important Safety Information

## A. Appliance Certification

This fireplace system has been tested and listed in accordance with UL 127 standards by Underwriters Laboratories Inc. for installation and operation in the United States.

This fireplace may be installed in sleeping rooms EXCEPT in manufactured homes. If installed with a gas log set, provisions for the National Fuel Gas Code must be met.

This fireplace has been tested and listed for use with the optional components specified in this manual. These optional components may be purchased separately and installed at a later date. The outside air kits must be installed at the time of fireplace installation.

Heat & Glo is a registered trademark of Hearth & Home Technologies.

**WARNING! Risk of Fire!** *Hearth & Home Technologies disclaims any responsibility for, and the warranty and agency listing will be voided by the following actions.*

### DO NOT:

- *install or operate damaged fireplace*
- *modify fireplace*
- *install other than as instructed by Hearth & Home Technologies*
- *operate the fireplace without fully assembling all components*
- *overfire*
- *install any component not approved by Hearth & Home Technologies*
- *install parts or components not Listed or approved*

*Improper installation, adjustment, alteration, service or maintenance can cause injury or property damage. For assistance or additional information, consult a qualified installer, service agency or your dealer.*

 **WARNING:** This product and the fuels used to operate this product (wood and wood pellets), and the products of combustion of such fuels, can expose you to chemicals including carbon black, which is known to the State of California to cause cancer and carbon monoxide, which is known to the State of California to cause birth defects or other reproductive harm. For more information go to: [www.P65Warnings.ca.gov](http://www.P65Warnings.ca.gov).

## B. Non-Combustible Materials

- Materials which will not ignite and burn, composed of any combination of the following:
  - Steel
  - Brick
  - Concrete
  - Glass
  - Iron
  - Tile
  - Slate
  - Plasters
- Materials reported as passing **ASTM E 136, Standard Test Method for Behavior of Metals, in a Vertical Tube Furnace at 750° C**

## C. Combustible Materials

- Materials made of or surfaced with any of the following materials:
  - Wood
  - Plant fibers
  - Plywood/OSB
  - Compressed paper
  - Plastic
  - Sheet rock (drywall)
- Any material that can ignite and burn; flame proofed or not, plastered or un-plastered

# 2 Getting Started

## A. Typical Fireplace System

Figure 2.1 Typical Fireplace System

## B. Design and Installation Considerations

**NOTICE:** Check building codes prior to installation.

- Installation MUST comply with local, regional, state and national codes and regulations.
- Consult insurance carrier, local building inspector, fire officials or authorities having jurisdiction over restrictions, installation inspection and permits.
- **Before installing**, determine the following:
  - Where the fireplace is to be installed.
  - The vent system configuration to be used.
  - Gas supply piping.
  - Electrical wiring.
  - Framing and finishing details.
  - Whether optional accessories - devices such as a fan, wall switch or remote control - are desired.

### 1. Selecting Fireplace Locations

This fireplace may be used as a room divider, installed along a wall, across a corner or used in an exterior chase. See Figure 2.2.

Locating the fireplace in a basement should be avoided. Locating near frequently opened doors, central heat outlets or returns, or other locations of considerable air movement can affect the performance.

Consideration should be given to these factors before deciding on a location.

**NOTICE:** In addition to these framing dimensions, also reference the following section:

- Framing and Clearances (Section 3).

**NOTICE:**

- Illustrations and photos reflect typical installations and are **FOR DESIGN PURPOSES ONLY**.
- Illustrations/diagrams are not drawn to scale.
- Actual installation/appearance may vary due to individual design preference.
- Hearth & Home Technologies reserves the right to alter its products.

**NOTICE:**

A minimum 1-1/2 in. air clearance at the back and a minimum 1-1/2 in. air clearance to the sides of the fireplace assembly must be maintained.

Chimney sections at any level require a 2 in. minimum air space clearance between the framing and chimney sections.

Figure 2.2 Fireplace Locations

## 2. Locating Fireplace & Chimney

Location of the fireplace and chimney will affect performance.

- Install within the warm airspace enclosed by the building envelope. This helps to produce more draft, especially during lighting and die-down of the fire.
- Installing the fireplace in a basement is not recommended.
- Penetrate the highest part of the roof. This minimizes the effects of wind loading.
- Locate termination cap away from trees, adjacent structures, uneven roof lines and other obstructions.
- Minimize the use of chimney offsets.
- Consider the fireplace location relative to floor and ceiling and attic joists.
- Take into consideration the termination requirements in Section 4.
- Install the outside air kit with the intake facing prevailing winds during the heating season.
- Ensure adequate outdoor air for all combustion appliances and exhaust equipment.
- Ensure furnace and air conditioning return vents are not located in the immediate vicinity of the fireplace.
- Avoid installing the fireplace near doors, walkways or small isolated spaces.
- Recessed lighting should be a “sealed can” design.
- Attic hatches weather stripped or sealed.
- Attic mounted duct work and air handler joints and seams taped or sealed.

### C. Tools and Supplies Needed

Before beginning the installation be sure the following tools and building supplies are available:

Reciprocating saw	Framing material
Pliers	Non-combustible sealant
Hammer	Gloves
Phillips screwdriver	Framing square
Flat blade screwdriver	Electric drill and bits
Plumb line	Safety glasses
Level	Tape measure
1/2-3/4 in. length, #6 or #8 self-drilling screws	
Misc. screws and nails	

### D. Inspect Fireplace and Components

***WARNING! Risk of Fire and/or Explosion! Damaged parts could impair safe operation. DO NOT install damaged, incomplete or substitute components. Keep fireplace dry.***

- Remove fireplace and components from packaging and inspect for damage.
- Vent system components and doors are shipped in separate packages.
- Report to your dealer any parts damaged in shipment.
- **Read all the instructions before starting the installation. Follow these instructions carefully during the installation to ensure maximum safety and benefit.**

### E. Fireplace System Requirements

The Heat & Glo fireplace system requirements consist of the following:

- Fireplace
  - Molded brick panels (hearth panel Included with fireplace, side and back panels sold separately)
  - Firescreen (included with fireplace)
  - Hearth Extension (sold separately)
  - Grate (included with fireplace)
- Outside Air System
  - Air Inlet Hood x2 (included with fireplace)
  - Flex (required, sold separately)
- Chimney System
  - Attic Insulation Shield (sold separately)
  - Chimney termination cap (sold separately)
- Non-combustible finish material

# 3 Framing and Clearances

## A. Fireplace Dimensions

Figure 3.1 Fireplace Dimensions

## B. Clearances

### WARNING! Risk of Fire!

You must comply with all minimum air space clearances to combustibles as specified in Figure 3.2. **DO NOT** pack required air spaces with insulation or other materials. Framing or finishing material used on the front of, or in front of, the fireplace closer than the minimums listed must be constructed entirely of non-combustible materials (i.e., steel studs, concrete board, etc.). Failure to comply may cause fire.

## Minimum Clearances to Combustibles

<b>WITHIN ENCLOSURE AREA</b>	
Fireplace to backwall	1-1/2 in. (38 mm)
Fireplace to sidewall	1-1/2 in. (38 mm)
Top standoffs to header	0 in. (0 mm)
Door opening to sidewall	24 in. (610 mm)
<b>MANTEL</b>	
Mantel minimum height	63-3/4 in. (1619 mm)
Maximum mantel depth	12 in. (305 mm)

Figure 3.2 Clearances to Combustible Materials

## C. Construct the Chase

A chase is a vertical boxlike structure built to enclose the fireplace and/or its vent system. Vertical chimneys that run on the outside of a building must be installed inside a chase.

In cold climates, Hearth & Home Technologies recommends that the chase be well insulated using batt type insulation between the joists.

Construction of the chase may vary with the type of building. These instructions are not substitutes for the requirements of local building codes. Local building codes **MUST** be checked.

Chases should be constructed in the manner of all outside walls of the home to prevent cold air drafting problems. The chase should not break the outside building envelope in any manner. All outer walls need to be insulated.

Building codes require false ceiling and ceiling firestops/attic shields at each floor of the chase or every 10 ft (3048 mm) of clear space to control spread of fire.

Walls, ceiling, base plate and cantilever floor at the first level of the chase should be insulated (see Figure 3.3.) Vapor and air infiltration barriers should be installed in the chase as per regional codes for the rest of the home. Additionally, Hearth & Home Technologies recommends that the inside surfaces be drywalled and taped (or the use of an equivalent method) for maximum air tightness.

Holes and other openings should be caulked with high temperature caulk or stuffed with unfaced fiber glass insulation.

**WARNING! You must install false ceilings and ceiling firestops at each floor of the chase or every 10 ft (3.05 m) to control spread of fire.**

**WARNING! Risk of Fire! DO NOT seal area between fire stop opening and chimney pipe except where they enter the attic or leave the warm air envelope of the home (use 600° F sealant).**

- The chase is constructed using framing materials much the same as the walls in your home. A variety of siding materials may be used including brick, stone, veneer brick, or standard siding materials.
- In constructing the chase, several factors must be considered:
  - Maintain a 2 in. (51 mm) air space around the chimney.
  - The chase top must be constructed of non-combustible material.
  - In cold climates, a firestop spacer and attic insulation shield should be installed in an insulated false ceiling at the 8 ft. (2438 mm) level above the fireplace assembly. This reduces heat loss through the chase.
  - In cold climates, the walls of the chase should be insulated to the level of the false ceiling as shown in Figure 3.3. This will help reduce heat loss from the home around the fireplace.

Figure 3.3 Chase Assembly

**WARNING! Risk of Fire! You must maintain a minimum 2 in. (51 mm) air space clearance to insulation and other materials surrounding the chimney system.**

- Insulation and other materials must be firmly secured to prevent accidental contact with chimney system.
- The chase must be properly blocked to prevent blown insulation or other combustibles from entering and making contact with fireplace or chimney.
- Failure to prevent contact between insulation or other materials and chimney system may cause overheating and fire.

Three examples of chase applications are shown in Figure 3.4.

Figure 3.4 Chase Constructions

## D. Frame the Fireplace

**NOTICE:** Hearth extension design must be determined before installation of fireplace.

If the fireplace is placed on the floor, the maximum height of a finished raised hearth is 3-3/4", if you want a higher raised hearth the fireplace must be placed on a platform.

Figure 3.5 shows a typical framing (using 2 x 4 lumber) of the fireplace, assuming combustible materials are used. All required clearances to combustibles around the fireplace must be adhered to. See Figure 3.2. Any framing across the top of the fireplace must be above the level of the top standoffs. (No recess above standoffs.)

The finished cavity depth must be no less than 28-1/2 in. (673 mm) from the finished backwall to the outside of front wall framing. Framing must extend straight up all the way to the ceiling.

**Note:** Before framing up the chase, consider where and how the chimney will run. If there are obstacles that might be in the way, it may be necessary to make the chase larger than shown to allow offsets to be used. Refer to offset chart on page 18.

**WARNING! Risk of Fire!** Comply with all minimum clearances specified.

- A minimum 1-1/2 in. (38 mm) air clearance must be maintained at the back and sides of the fireplace assembly.
- Chimney sections at any level require a 2 in. (51 mm) minimum air space clearance between the framing and chimney section.

**WARNING! Risk of Fire!** You must comply with all minimum air space clearances to combustibles. **DO NOT** pack required air spaces with insulation or other materials.

**CAUTION! Risk of Cuts/Abrasions.** Wear protective gloves and safety glasses during installation. Sheet metal edges are sharp.

Figure 3.5 Framing the Fireplace

## E. Secure and Level the Fireplace

This fireplace may be placed on either a combustible or noncombustible continuous flat surface. Slide the fireplace into position. Be sure to provide the minimum 1-1/2 in. air clearance at the sides and 1-1/2 in. at the back of the fireplace.

The fireplace should be positioned so the face of the non-combustible material on the fireplace will be flush with the face of the drywall on the walls.

Level the fireplace and shim as necessary.

**WARNING! Risk of Fire! Prevent contact with sagging, loose insulation.**

- **DO NOT** install against vapor barriers or exposed insulation.
- Secure insulation and vapor barriers.
- Provide minimum air space clearances at the sides and back of the fireplace assembly.

## F. Protective Metal Hearth Strips

**WARNING! Risk of Fire! Protective metal hearth strips MUST be installed on combustible surfaces. DO NOT cover metal strips with combustible materials. Sparks or embers may ignite flooring.**

**WARNING! Risk of fire! High temperatures, sparks, embers or other burning material falling from the fireplace may ignite flooring or concealed combustible surfaces.**

- Protective metal hearth strips MUST be installed.
  - Hearth extensions MUST be installed exactly as specified.
- Locate the two protective metal hearth strips measuring approximately 26 in. x 4 in. (660 mm x 102 mm) included with this fireplace.
  - Slide each metal strip 2 in. (51 mm) under front edge of fireplace.
  - Overlap strips in the middle of fireplace opening by 1 in. (25 mm) minimum.
  - Metal strips must extend beyond the front and sides of the fireplace opening by at least 2 in. (51 mm), Figure 3.6).
  - Protect the front of a platform elevated above the hearth extension with metal strips (not included with fireplace) per Figure 3.7. See Section 6 for hearth extension instructions.

Figure 3.6 Position the Protective Metal Hearth Strips

Figure 3.7 Protect the Front of an Elevated Platform

## G. Outside Air Kit (Required on both sides)

Outside air kits must be used for combustion and to provide cooling air to prevent overheating. Hearth & Home Technologies recommends you utilize the shortest duct run to optimize the performance of the outside air kit and install a P-Trap (see Figure 3.10). The outside air kit inlet hoods should be positioned in a manner that will not allow snow, leaves, etc. to block the inlet. In some installations the air duct may need to be run vertically. In such an installation, a 3 ft (914 mm) height difference must be maintained from the top of the uppermost chimney section to the outside air inlet hoods.

Refer to Figures 3.8 and 3.9 when placing the outside air inlet hoods.

► **Note:** The maximum length is 40 feet for each kit.

**WARNING! Risk of Fire!** The outside air kits are installed on the both sides of the fireplace to prevent overheating and fire.

- Cut a 6 in. (152 mm) hole in outside wall to accommodate air piping.
- Use 6 in. (152 mm) flex (not supplied) to directly connect outside air to fireplace intake. Insulate the pipe to prevent frost condensation.
- Use the supplied outside air inlet hoods.
- Seal between the wall and the pipe with silicone to prevent moisture penetration and air leaks.
- Seal between the outside air inlet hoods and the house with silicone to prevent air infiltration.

**CAUTION! Risk of Fire or Asphyxiation! DO NOT** draw outside combustion air from wall, floor or ceiling cavity, or enclosed spaces such as an attic or garage.

- **DO NOT** place outside air inlet hood close to exhaust vents or chimneys. Fumes or odor could be drawn into the room through the fireplace.
- Locate outside air inlet hood to prevent blockage from leaves, snow/ice, or other debris. Blockages could cause combustion air starvation.

**CAUTION! Risk of Cuts/Abrasions.** Wear protective gloves and safety glasses during installation. Sheet metal edges are sharp.

**NOTICE:** The fireplace provides some outside air for combustion. Other methods may be necessary if more air is required.

Figure 3.9 Outside Air Inlet Locations

Figure 3.8 Outside Air Installation

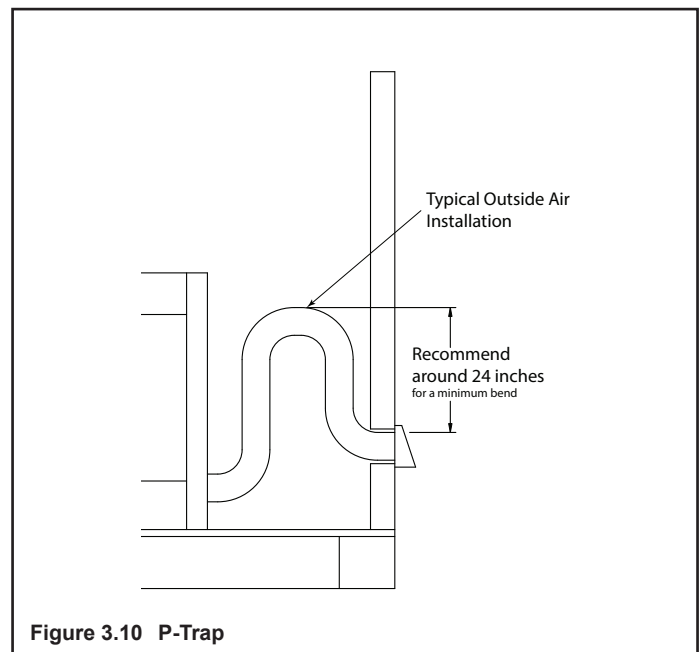

Figure 3.10 P-Trap

# 4 Chimney and Termination Installation

**NOTICE:** Chimney performance may vary.

- Trees, buildings, roof lines and wind conditions affect performance.
- Chimney height may need adjustment if smoking or overdraft occurs.

## A. Chimney Requirements

Measure vertical distances from the base of the fireplace.

	<b>Feet</b>	<b>Meters</b>
• Minimum overall straight height	18	5.49
• Minimum height with offset/return	18.5	5.64
• Maximum height	50	15.24
• Maximum chimney length between an offset and return	20	6.10
• Maximum distance between chimney stabilizers	25	7.62
• Maximum unsupported chimney length between the offset and return	6	1.83
• Maximum unsupported chimney height above the fireplace	25	7.62
• Maximum unsupported chimney above roof	6	1.83
• Minimum height with double offset/return	22.5	6.86

**WARNING! Risk of Fire!** You must maintain 2 in. (51 mm) air space clearance to insulation and other combustible materials around the chimney system. Failure to do so may cause overheating and fire.

**Table 4.1**

<b>Height of Chimney Components</b>	<i>in.</i>	<i>mm</i>
<b>Stabilizer</b>		
14DCA-ST		
<b>Firestop</b>		
14DCA-FS		
<b>Elbows</b>		
14DCA-E15 - 15° Elbow		
14DCA-E30 - 30° Elbow		
<b>Miscellaneous</b>		
14DCA-ES - Elbow Strap		
14DCA-SS - Supplementary Support		
14DCA-IS - Insulation Shield		
14DCA-RRS - Roof Radiation Shield		
14DCA-CTF - Chase Top Flashing		
14DCA-CTC - Chase Top Collar		
14DCA-VC1 - Chimney Cap		
14DCA-SC - Storm Collar		
14DCA-WS - Wall Strap		
<b>Chimney Sections*</b>		
14DCA-12	10 1/2	267
14DCA-18	16 1/2	419
14DCA-36	34 1/2	876
14DCA-48	46 1/2	1181

\* Dimensions reflect effective height.

Determine the chimney components needed to complete your particular installation:

- Measure the total vertical height of the fireplace installation from the base of the fireplace assembly to the approximate location of the bottom of the termination cap.
- Subtract the effective height of the fireplace assembly (see Figure 4.1) from the total vertical height to determine the overall height of the chimney installation.
- Create a schematic for your application similar to Figure 4.1 showing components required (referring to Table 4.1).
- Install a ceiling firestop whenever the chimney penetrates a floor/ceiling.

**NOTICE:** A maximum of two offset and return may be used.

**CAUTION! Risk of Fire and/or Asphyxiation! DO NOT connect this fireplace to a chimney flue servicing another appliance. Do NOT connect to any air distribution duct or system. These actions could cause overheating/fire in the chimney flue, or release of exhaust fumes into the living areas.**

Figure 4.1

**A MAJOR CAUSE OF VENT RELATED FIRES IS FAILURE TO MAINTAIN REQUIRED CLEARANCES (AIR SPACES) TO COMBUSTIBLE MATERIALS. IT IS OF THE UTMOST IMPORTANCE THAT DURACHIMNEY II BE INSTALLED ONLY IN ACCORDANCE WITH THESE INSTRUCTIONS.**

## B. Clearances

Always allow at least a 2-inch clearance between DuraChimney II Pipe and any combustible materials.

- Never fill any required clearance space with insulation or any other materials.
- Combustible materials include lumber, plywood, sheetrock, plaster and lath, furniture, curtains, electrical wiring, and building insulation.

## C. Installation Notes

Proper planning for your DuraChimney II installation will result in greater safety, efficiency, and convenience, as well as saving time and money. You must use only authorized DuraChimney II parts to maintain a listed chimney system. Do not mix parts or try to match with other products or use improvised solutions.

- Do not install damaged or modified parts.
- Practice good workmanship. Sloppy work could jeopardize your chimney's safety.
- **Keep electrical wiring and building insulation away from all chimneys.**
- When deciding the location of your chimney, try to avoid modifications to roof beams and other structural components of the building.

If you have any questions, contact either your dealer or Simpson Dura-Vent directly.

## D. Frame Openings

- From the ceiling, drop a plumb bob to the center of the fireplace's flue outlet and mark this center point on the ceiling.
- Mark appropriate cutting lines around the center point. Cut a square hole in the ceiling. Frame a level, square, 21 in. x 21 in. (533 mm x 533 mm) opening centered over the hole that you have cut.
- Frame openings at each floor level above the fireplace (Figure 4.1). These openings are to hold the firestop and attic insulation shield.
- Locate each opening by dropping a plumb bob to the four corners of the opening below.
- Maintain the minimum 2-inch clearance/air space. Maintain the minimum clearances and dimensions as specified in Table 4.1.

## E. Cut Roof Opening

Determine and cut an opening in the roof directly above the opening below, and at least 4-inches larger than the chimney's outside diameter to provide at least a 2-inch clearance all around the chimney.

- The chimney must be centered within this opening and maintain the minimum 2-inch clearance to combustibles.

## F. Install Firestop

A firestop is required on each floor penetration in multistory installation. Building Codes require a firestop at every floor/ceiling level, including where the chimney penetrates into the attic. Figure 4.1 shows a typical 2-story installation with an attic.

Note: a firestop is not installed where the chimney penetrates through the roof.

- The firestop is installed on the underside of the ceiling/floor framing (Figure 4.2).
- Use a minimum of one 8 penny nail or one 1-1/4" wood screw per corner.

Figure 4.2

## G. Assemble Chimney Sections

- Attach the first chimney section or offset onto the top of the fireplace (Figure 4.3). Sheet metal screws are required to connect chimney section to the fireplace starter collar. Continue to add additional sections of chimney as needed.
- Use a wall strap every eight feet of chimney height.
- For each additional chimney section use four of the sheet metal screws provided to make a secure connection between the chimney sections (Figure 4.4). Do not penetrate the inner liner of the chimney.

## H. Using Offsets/Returns

- Use an offset/return to bypass overhead obstructions.
- An offset and return can be used as a single entity or separated by chimney section(s).

**WARNING! Risk of Fire! DO NOT use offset/returns greater than 30 ft. Chimney draft will be restricted and could cause overheating and fire.**

- Measure the shift required to avoid the overhead obstruction (Offset, Figure 4.5).
- Find the appropriate offset dimension listed in Table 4.2.
- The rise (see Figure 4.5) coinciding with the offset dimension in Table 4.2 represents the required vertical clearance needed to complete the offset/return.

Table 8.2

Elbow Angle from Vertical	Chimney Length Between Elbows	Offset Inches	Rise Inches	Offset Millimeters	Rise Millimeters
15°	0	2 5/8	21 5/8	67	549
15°	12 in./305 mm	5 1/2	32 1/4	140	819
15°	18 in./457 mm	7 1/8	38	181	965
15°	36 in./914 mm	11 3/4	55 3/8	298	1407

30°	0	6 1/4	24 1/2	159	622
30°	12 in./305 mm	11 3/4	34	298	864
30°	18 in./457 mm	14 3/4	39 1/4	375	997
30°	36 in./914 mm	23 3/4	54 7/8	603	1394
30°	48 in./1219 mm	29 3/4	65 1/4	756	1657

## I. Offset Elbow Installation

A 30° Elbow (measured from the vertical) is the largest that can be used in an offset. A 30° Elbow may not be combined with another Elbow to make a steeper offset (e.g. two 30° Elbows are not allowed to be put together to form a 60° elbow.). Avoid Elbows if possible. A totally vertical chimney is more efficient. When Elbows are necessary to avoid obstructions such as rafters, ridgepoles, or joists, you are only allowed to use 2 pair of Elbows in any one chimney system. Horizontal runs of chimney violate building code and are not allowed.

- Attach elbows

Attach elbow to chimney section or other elbow by mating the male and female ends with each other and using four sheet metal screws provided. Attach one elbow to the chimney section below, and align it for the offset. Determine the required offset length and attach an appropriate length (or lengths) of chimney section(s) above the elbow. Attach the second elbow above the chimney section to complete the offset (Figure 4.6).

- Secure offset

Use an elbow strap to secure the offset. Secure the elbow strap's band to chimney around the upper portion of the top elbow, then tighten the nut and bolt until the clamp is firm. Wrap the elbow strap end over an adjacent joist or rafter and secure it with at least two 8-penny nails or two #8, 1-1/2" screws. Add additional elbow straps for each section of chimney in the offset (Figure 4.7). Every chimney section in the offset must be supported. Do not add more chimney sections until the elbows and offset are supported. Be sure that the chimney remains vertical.

## J. Supplementary Support & Stabilizer

Install a supplementary support if total chimney height is greater than 50 feet, or if the fireplace manufacturer requires it. If additional support is needed, install one or more supplementary supports which can each support 25-feet of chimney (Fig. 4.8).

- Clamp the supplementary support band around the pipe using the nut and bolt provided, and anchor the support to nearby building framing.
- Always maintain the 2" clearance to combustibles from the chimney pipe. A stabilizer is available and may be required by some fireplace manufacturers to keep the chimney vertical and help maintain clearances to combustibles within a chase.
- Clamp the stabilizer to the pipe using the nut and bolt provided, and secure legs to nearby framing using plumber's tape or guy-wires (Fig. 4.9).

**Note:** The stabilizer does not support the weight of the chimney, it is only used to keep chimney centered within a chase.

## K. Install Attic Insulation Shield

The attic insulation shield must be installed where the chimney passes into an attic. Its purpose is to prevent debris and insulation from getting too close to the chimney. In attic areas where this shield cannot fit, or is not used you must enclose the attic portion of the chimney in a framed enclosure. If the chimney is fully enclosed through the attic, an attic insulation shield is not required. Install the attic insulation shield as follows:

- Remove any insulation from attic floor around the framed opening.
- Assemble chimney sections until at least 18 inches of chimney extends above the firestop.
- Slip the attic insulation shield over the chimney until the base sits squarely on the framed opening (Figure 4.10).
- Secure the attic insulation shield to the top of the framed opening using at least two 8-penny nails or two #8, 1-1/2 in. wood screws per side (Figure 4.11).
- Wrap the collar of the attic insulation shield around the chimney and fasten it loosely. Slide the collar down to meet the attic insulation shield. Tighten the bolts to secure the collar in place (Figure 4.11).
- Combustible material may come into contact with the attic insulation shield as long as the required clearances are maintained to the chimney pipe.

## L. Install Roof Radiation Shields

Roof radiation shields must be used to provide protection for roof or chase framing members.

**Note:** Roof radiation shields do not allow for a reduced clearance to combustibles.

Clearance to combustibles must be a minimum of 2" away from the chimney pipe.

- Install roof radiation shields at either the top of the chase or where the chimney penetrates the roof, whichever is the top of the installation.
- Roof radiation shields are built with a 1/2" air gap standoff from the joist face (Figure 4.12). The corners of the roof radiation shields overlap each other to ensure proper position.
- Secure the roof radiation shields to the top of the framing members using screws or nails in the corners.
- If framing members are further away from the chimney than 2 in., center the roof radiation shield to the chimney on the framing member and secure in place with screws or nails.

## M. Attach Flashing

For chase enclosures, use the chase top flashing. The chase top flashing allows for a 1-1/2 in. clearance maintained from the chimney (Figure 4.14) and provides required ventilation air.

- Chase top flashings (includes chase top collars and spacing clips) are available from your HHT dealer.
- Additional non-combustible structural supports can be field-fabricated to help support the chase top flashing if needed, provided the air ventilation requirements are maintained. See Figure 4.15.
- If the chase top flashing (40 in. x 40 in.) does not ensure the minimum 1/2 in. spacing and perimeter ventilation requirements as shown in Figure 4.13., use a chase top collar and field-construct the flashing as needed for the chase dimensions. Skip to **Field-Constructed Chase Top Flashing**.

- Install the chase top flashing at the top of the chase with a 1/2 in. minimum air clearance off the top of the chase construction (Figure 4.13).
- Spacing clips can be field-fabricated as needed out of 24 GA sheet metal or other suitable non-combustible material (refer to Figure 4.13)
- Insect-guard screening may be added between the chase and chase top flashing.
- Secure the chase top flashing to the chase with at least three screws or nails per side.
- When installed, the bottom of the chimney cap must be at least 6 in. above the chase top flashing.

- Secure the chase top flashing to the chase with at least three screws or nails per side.
- When installed, the bottom of the chimney cap must be at least 6 in. above the flashing (Figure 4.16).

### Field-Constructed Chase Top Flashing

- Field-constructed flashing must be constructed of 24 GA minimum sheet metal or other suitable non-combustible materials.
- The flashing must be oversized to allow 1/2 in. air gap around all four sides.
- Include a minimum 1 in. turn down and a 1/2 in. drip edge (optional) to prevent water from seeping into the chase. Refer to Figure 4.16.
- Additional non-combustible structural supports can be field-fabricated to help support the chase top flashing if needed, provided the air ventilation requirements are maintained. See Figure 4.15.
- Spacing clips can be field-fabricated as needed out of 24 GA sheet metal or other suitable non-combustible material (refer to Figure 4.13), or purchased from Hearth & Home Technologies.
- Secure the chase top collar section to the field-fabricated flashing with sheet metal screws or rivets (Figure 4.15).
- Seal chase top collar section to flashing with non-hardening waterproof sealant to ensure a weather tight connection. See Figure 4.15.
- Insect-guard screening may be added between the chase and flashing.

## N. Finish Top

- Slide the storm collar down over the chimney to the top of the flashing. The storm collar must be installed 1 in. off the chase top flashing to provide proper ventilation (Figure 4.17).
- Tighten the bolts of the storm collar and seal the storm collar against the chimney with sealant. Be sure chimney and offsets are properly supported.
- Apply a non-hardening waterproof sealant around the chimney at the point where the storm collar will meet the chimney just above the flashing (Figure 4.17).
- Attach the chimney cap onto the top of the chimney by setting the female end of the cap onto the male end of the last chimney section. Secure the cap by using four sheet metal screws (provided, Figure 4.18.)
- Do not push down from the top portion of the cap as this may damage the cap. Push from the lower section of the cap if needed.
- The chimney cap top can be removed for chimney cleaning.

Figure 4.17

Figure 4.18

## O. Chimney Termination Requirements

- Install a cap approved and listed for this fireplace system.
- Locate cap where it will not become plugged by snow or other materials.
- Locate cap away from trees or other structures.
- The bottom of the termination cap must be at least 3 ft (.91 m) above roof AND at least 2 ft (.61 m) above any portion of roof within 10 ft (3.05 m) as shown in Figure 4.19.
- See Figure 4.19 for distance required between caps.

Figure 4.19 Multiple Chimney Locations

# 5 Shrouds

## A. Shroud Requirements

**WARNING! Risk of Fire!** Shrouds must be constructed as specified. Improper construction may overheat chase top.

- Chase top shrouds may be field constructed where permitted by regional building codes.

**NOTICE:** Some regional codes require an agency-Listed shroud. Consult your local building officials.

- Hearth & Home Technologies supplies UL listed shrouds. See your dealer for details.

Shrouds can either be field-fabricated or factory-fabricated, but they must meet the requirements as specified in these instructions. Shrouds must be constructed of a minimum 24 ga (.024 in.) stainless steel, aluminized steel, galvanized steel, or copper. Other materials may also be used, such as brick, mortar, stucco, stone, etc. provided they are completely non-combustible. Check with your local building code authorities for any additional shroud requirements. Shrouds must be able to be removed to allow chimney access to properly clean the chimney. DuraChimney II installations which include the use of a shroud must comply with the following requirements (Figure 5.1)

- DuraChimney II must maintain at least 2 in. (51 mm) clearance from combustible materials.
- The chase enclosure must be ventilated.
- The chase top flashing or field-fabricated chase pan must be used. Field-fabricated chase pans are acceptable if they meet these requirements:
  - Material must be 24 ga (.024 in) galvanized steel or equivalent.
  - Chase pan must have opening 3 in. (76 mm) larger than outside diameter of chimney pipe with at least a 1/2 in. (13 mm) upturned flange/collar.
  - Chase pan must overhang chase by 1/2 in. (13 mm) per side for proper air flow.
  - Chase pan must have a 1 in. (25 mm) down turned outside edge (weather protection).

Figure 5.1 Shroud Requirements

- Field-fabricated spacing clips (1/2 in./13 mm tall, 24 ga/.024 in. galvanized steel) must be used to support the chase top flashing or chase pan, in order to provide air flow.
- 14 in. (345 mm) DuraChimney II pipe must extend at least 6 in. (152 mm) above the chase pan/flashing.
- A DuraChimney II cap must be used inside the shroud.
- The shroud must not be in direct contact with any of the DuraChimney II components (other than the chase top flashing).
- All open areas of the shroud must be covered with 1/2 in. (13 mm) stainless or galvanized steel mesh screen to prevent debris from entering the shroud.
- Shrouds must follow the dimensional requirements specified in Tables 5.1, 5.2 or 5.3, depending on the style of shroud used. The three basic shroud styles are 1) House, 2) Arch or Mailbox, and 3) Pyramid. Most factory-fabricated shrouds will fall under one of these basic style categories.

## B. House Style Shroud

The house-style shroud is roughly square or rectangular with a closed top and exhaust openings on four sides (Figure 5.2). Table 5.1 lists the minimum shroud dimensions, the minimum open area per side, and the minimum total open area for the shroud.

**Table 5.1**

House Style Shroud Minimum Dimensions											
Chimney Diameter		Chimney Area		Min Height H		Min Length L		Min Width W		Min Open Area per side	Min Total Open Area
<i>in</i>	<i>mm</i>	<i>in</i>	<i>mm</i>	<i>in</i>	<i>mm</i>	<i>in</i>	<i>mm</i>	<i>in</i>	<i>mm</i>	<i>sq in</i>	<i>sq in</i>
14	355.6	154	3911.6	24	609.6	32	812.8	32	812.8	260	1040

H: Minimum height of shroud  
 L: Minimum length of shroud  
 W: Minimum width of shroud

Shaded area represents screened open area. Actual shape of shroud may vary as long as minimum dimensions and minimum open area requirements are met.

**Figure 5.2 House-Style Shroud Minimum Dimensions**

### C. Arch / Mailbox Style Shroud

The arch or mailbox style shroud generally has two solid sides and a solid top. The exhaust openings are on the two open ends of the arch (Figure 5.3). Table 5.2 lists the minimum shroud dimensions, the minimum open area per side, and the minimum total open area for the shroud.

**Table 5.2**

Arch / Mailbox Style Shroud Minimum Dimensions											
Chimney Diameter		Chimney Area		Min Height H		Min Length L		Min Width W		Min Open Area per side	Min Total Open Area
<i>in</i>	<i>mm</i>	<i>in</i>	<i>mm</i>	<i>in</i>	<i>mm</i>	<i>in</i>	<i>mm</i>	<i>in</i>	<i>mm</i>	<i>sq in</i>	<i>sq in</i>
14	355.6	154	3911.6	24	609.6	32	812.8	32	812.8	520	1040

H: Minimum height of shroud  
 L: Minimum length of shroud  
 W: Minimum width of shroud

Shaded area represents screened open area. Actual shape of shroud may vary as long as minimum dimensions and minimum open area requirements are met.

**Figure 5.3 Arch/Mailbox-Style Shroud Minimum Dimensions**

### D. Pyramid Style Shroud

The pyramid style shroud is roughly square or rectangular with an open top for exhaust as well as openings along the base of the four sides (Figure 5.4). Table 5.3 lists the minimum shroud dimensions, including the minimum height and length of the base opening.

**Table 5.3**

Pyramid Style Shroud Minimum Dimensions											
Chimney Diameter		Min Height H1		Min Length L		Min Width W		Min Base B		Min Height H2	
<i>in</i>	<i>mm</i>	<i>in</i>	<i>mm</i>	<i>in</i>	<i>mm</i>	<i>in</i>	<i>mm</i>	<i>in</i>	<i>mm</i>	<i>in</i>	<i>mm</i>
14	355.6	24	609.6	32	812.8	32	812.8	22	558.8	2	50.8

L: Minimum length of shroud top opening  
 W: Minimum width of shroud top opening  
 H1: Minimum total height of shroud  
 B: Minimum length of opening along base  
 H2: Minimum height of opening along base

Shaded area represents screened open area. Actual shape of shroud may vary as long as minimum dimensions and minimum open area requirements are met.

**Figure 5.4 Pyramid-Style Shroud Minimum Dimensions**

# 6 Finishing

## A. Finishing Material

Refer to Sections 1.B. and Sections 1.C. for combustible/non-combustible materials. Refer to Figure 6.1 for non-combustible zone.

**WARNING! Risk of Fire! You must maintain clearances.**

- **DO NOT** cover metal fireplace front with combustible materials.
- Install combustible materials only to specified clearances on top front and side edges.
- Apply metal lath to the metal face or non-combustible board with corrosion-resistant, self-drilling, self-tapping screws capable of penetrating the metal surface of the fireplace face in preparation for final finishing material.
- Complete framing and apply drywall over framing.
- A bead of 300° F minimum non-combustible sealant must be used to close off any gaps at the top and sides between the fireplace and drywall to prevent cold air leaks.
- Large gaps can be bridged with fiberglass rope gasket.

Figure 6.1 Non-combustible Facing

Figure 6.2 Decorative Facing

**VERY IMPORTANT: Allow the mortar 72 hours to cure before operating the fireplace.**

**Figure 6.3 Facing Materials and Mortar**

## B. Hearth Extension, Building and Finishing

**WARNING! Risk of Fire!** High temperatures, sparks, embers or other burning material falling from the fireplace may ignite flooring or concealed combustible surfaces.

- Protective metal hearth strips **MUST** be installed.
- Hearth extensions **MUST** be installed exactly as specified.

A hearth extension must be installed with all fireplaces to protect the combustible floor in front of the fireplace from both radiant heat and sparks.

- You **MUST** use a hearth extension with this fireplace.
- Refer to Figure 6.4 for minimum dimensions.
- This fireplace has been tested and approved for use with a hearth extension insulated to a minimum R value of 2.06.
- The hearth extension material **MUST** be covered with tile, stone or other non-combustible material.
- Manufactured hearth materials will usually have a published **R value** (resistance to heat) or **k value** (conductivity of heat). Refer to the formula in Table 6.1 to convert a k value to an R value,
- Refer to Table 6.2 for hearth extension insulation alternatives.

**Table 6.1**

$$R = 1/k \times \text{inches of thickness}$$

**Table 6.2**

Hearth Extension Insulation Alternatives, R Value = 2.06			
Material	k per inch thick	r per inch thick	Minimum thickness required
Hearth & Home HX3, HX4	0.49	2.06	1 in.
USG Micore 300™	0.49	2.06	1 in.
USG Durock™ Cement Board	1.92	0.52	4 in.
Cement Mortar	5.0	0.20	10 1/2 in.
Common Brick	5.0	0.20	10 1/2 in.
Ceramic Tile	12.50	0.08	25 3/4 in.
Armstrong™ Privacy Guard Plus	0.46	2.18	1 in.
Marble	14.3-20.0	0.07-0.05	29 1/2 - 41 1/4 in.

### 1. Fireplace Installed Flush on the Floor and Hearth Extension Raised to Bottom of Firebox Opening

Non-combustible flooring a minimum of 20 in. (508 mm) in front of and 12 in. (305 mm) to each side of the fuel opening is required.

The hearth framing must be constructed of non-combustible materials (such as metal framing or equivalent material) and placed on HX3(s), HX4(2), and 1/2 in. Durock or equivalent material. See Figures 7.4 and 7.5.

**When creating the platform, allow for the thickness of the non-combustible finishing materials.**

Seal gaps between the hearth extension and the front of the fireplace with a bead of non-combustible sealant or grout.

## 2. Raised Hearth Extension and Raised Fireplace

Non-combustible flooring a minimum of 20 in. (508 mm) in front of and 12 in. (305 mm) to each side of the fuel opening is required.

The hearth framing must be constructed of non-combustible materials (such as metal framing or equivalent material) and placed on HX3(s), HX4(2), and 1/2 in. Durock, or equivalent material. See Figure 6.9.

**When creating the platform, allow for the thickness of the non-combustible finishing materials.**

Seal gaps between the hearth extension and the front of the fireplace with a bead of non-combustible sealant or grout.

## 3. Fireplace Opening and Hearth Extension Flush with the Floor

Non-combustible flooring a minimum of 30 in. (762 mm) in front of and 12 in. (305 mm) to each side of the fuel opening is required.

The hearth framing must be constructed of non-combustible materials (such as metal framing or equivalent material) and placed on HX3(s), HX4(2), and 1/2 in. Durock, or equivalent material. See Figure 6.10.

**When creating the platform, allow for the thickness of the non-combustible finishing materials.**

Seal gaps between the hearth extension and the front of the fireplace with a bead of non-combustible sealant or grout.

### C. Non-Combustible Sealant Material

After completing the framing and applying the facing materials over the framing, a bead of non-combustible sealant must be used to close off any gaps at the top and sides between the fireplace and hearth.

**WARNING! Risk of Fire!**

- Maintain clearances.
- Use only non-combustible material below standoffs, material such as cement board is acceptable.
- Framing or finishing material used on the front of the fireplace closer than the minimums listed, must be constructed entirely of non-combustible materials (i.e., steel studs, concrete board, etc.).

**WARNING! Risk of Fire!**

Hearth & Home Technologies is not responsible for discoloration, cracking or other material failures of finishing materials due to heat exposure or smoke.

- Choose finishing materials carefully.

### D. Sidewalls/Surrounds

- Locate adjacent combustible sidewalls a minimum of 24 in. (305 mm) from the fireplace opening.
- Mantel legs, surround, stub wall, whether combustible or non-combustible, may be constructed as shown in Figure 6.12.

## E. Mantel and Wall Projections

A combustible mantel may be positioned no lower than 63-3/4 in. (1619 mm) from the base of the fireplace.

The combustible mantel may have a maximum depth of 12 in. (305 mm). Combustible trim pieces that project no more than 1-1/2 in. (38 mm) from the face of the fireplace can be placed no closer than 6 in. (152 mm) from the top or side of the decorative front. Combustible trim must not cover:

- the metal surfaces of the fireplace,
- where the non-combustible board is placed over the metal surfaces,
- the space between the metal face of the fireplace and framing members.

### **WARNING! Risk of Fire!**

- *You must seal around the finishing material to fireplace.*

# 7 Fireplace Setup

## A. Install Hearth Molded Brick Panel

- Place hearth panel into the fireplace.

## B. Install Back Molded Brick Panel

- Remove Screen Rods
- Remove Smokeshield
- Refer to Figure 7.1.
- Set the grate brackets in place, 26.5 in. (673 mm) center to center.
- Install the back panel. Center from side to side.
- Install two refractory clips in the mortar lines across the top. Tighten these and all previously installed brackets.

## C. Install Side Molded Brick Panel

- If a gas line is to be installed, remove the knockouts in the inner firebox and in the outer shell on the side of your choice. Refer to dimension drawings for location of knockouts and Section 7.I. for gas provisions.
- Install side panel, tapered edge to the front. Align the front edge with the front of the column (or butted to the surround if installed).
- Install two refractory clips in the mortar lines across the top. Tighten these and all previously installed brackets.
- Install second side panel following the steps above.
- Replace smokeshield.

## D. Install Screens

- Lay one screen panel flat and slide the round end of the rod through the rings starting at the handle side of screen. Leave the last ring off the rod.
- Insert the rod through the hole in the bracket. Slip the last ring over the rod on the other side of the bracket.
- Fasten the flat end of the screen rod back in place using the screw removed earlier.
- Repeat for the other screen panel.

## E. Install Mortar (Optional)

The brick panels have been designed for installation without the use of mortar being necessary. If the look of mortar is preferred, it is available and can be installed. Follow the directions on the container for mixing.

The mortar can be applied with a mortar bag or troweled on. Applying with mortar bag may be easiest and less messy. Clean sparingly as paint will rub off and may need to be touched up. Touch up paint is available as an accessory.

**Note:** Herringbone refractory may require two buckets of mortar. The Traditional requires only one.

## F. Grate

- Install the grate if a gas log set is not going to be installed.
- Position the rear grate bar in the Grate Retainer.
- Position the top of the grate retainer over the rear grate bar and fasten in place with screw provided.

## G. Gas Log/Lighter Provision

**WARNING! Fire and/or Asphyxiation Risk! Use with solid wood fuel or decorative gas appliance only. Gas fire generates fumes.**

- Damper must be locked fully open when gas logs are installed

A certified gas log lighter or decorative gas log set can be installed in this fireplace.

### Vented Gas Logs

- Maximum input is 100,000 BTU/hr.
- Decorative gas appliance must be certified to **ANSI Z21.60/CSA 2.26** "Standard for Decorative Gas Appliances for Installation in Vented Fireplaces".
- Must be installed in accordance with the **National Fuel Gas Code, ANSI Z223.1** and **Natural Gas Installation Code, CAN/CGA-B149.1-M95** or the **Propane Installation Code, CAN/CGA-B149.2-M95**.
- A gas log set must incorporate a gas shutoff.
- Gas Log set requires the damper to be locked fully open.
- A listed automatic damper system with safety interlock may be used in this fireplace with only compatible, listed gas log sets. See damper system manufacturer's instructions.
- Knockouts are provided on both sides of the fireplace and in refractories for 1/2 in. (13 mm) iron pipe.
- Seal refractory around pipe with fireplace mortar or a non-combustible sealant.

### Unvented Gas Logs

**CAUTION!** If an unvented gas appliance is installed in the fireplace, the gas appliance must only be operated with the fireplace glass door fully open (if included). Only unvented gas log sets which have been found to comply with the standard for unvented room heaters, ANSI Z211.11.2, are to be installed in this fireplace. If an unvented gas appliance is installed it must incorporate an automatic shutoff device, and must be installed in accordance with the National Fuel Gas Code Z223.1, Latest edition.

**WARNING! Do Not operate an unvented gas log set in this fireplace with the chimney removed.**

## H. Wood Burning Inserts

**WARNING! Risk of Fire! Improper installation of wood inserts may cause fireplace or chimney system to overheat.**

If a wood burning insert is being installed in this fireplace, Hearth & Home Technologies recommends full reline of the chimney.

- Cooling air openings at the top of the chimney must not be obstructed in any manner.
- Hearth & Home Technologies recommends securing the reline at the top of the flue and using the cap certified for use with this fireplace system.
